Direct answer
one model call, no tools
Answer
Question
Analyser
answer directly or plan
Planner
writes the steps, one tool each
at most 10 steps
Tool call
smart query router picks the retrieval strategy (no model call)
Distiller
condenses a very long step output
Supervisor
scores each step; below 70, reruns it (up to 3 times)
retry
Synthesizer
writes the answer from the steps
no analyser: every question planned
routing fix: factual questions planned
no planner: one fixed step to the router
every step distilled, with either prompt
no supervisor: each step once, no retry
no synthesizer: the steps' text is the answer
model call
no model call
